

# KinetDx® Conversion

## Your Current Situation:

- Your version of KinetDx® is end-of-life and end-of-service
- Parts are hard to find
- There is no plan for upgrading
- You need your data available for clinical and legal purposes

## The Background:

Your KinetDx® has served you well, however it is time to move on. A simple, rapid and unencumbered solution to move your data off of the KinetDx® archive to a new solution is all you want. Gaining back the floor space by removing the DS3000™ server and all of those tapes would be appreciated as well.

## Our Assessment:

Secant Healthcare offers the solution you are looking for. Whether the goal is to move the data to your new PACS or just keep it in a non-proprietary HIPAA compliant storage solution, Secant can provide a cost effective, rapid migration with minimal to no impact on your clinical workflow or staff.

## Our Recommendation:

Secant offers an off-site rapid migration solution that converts your patient data to a fully DICOM 3.0 compliant format. The resulting data can be moved to a new PACS at your facility, loaded on a commercially available HIPAA compliant storage solution or burned to media where it is labeled and indexed for easy retrieval.

Secant works with your back-up media to read, convert and correct the data while moving it to a DICOM compliant format. Whether you have 20 DVDs or 1,000 DLT tapes, Secant has a rapid migration solution to quickly and efficiently move data off of your legacy KinetDx®. By utilizing your back-up media, our high speed migration process has no impact on your clinical workflow.

## Your Options and Solutions:

- Exam and Patient Demographic Data Cleansing
- Migration to PACS
  - Output of the KinetDx® migration can be moved to your PACS
- Storage on a HIPAA Compliant Archive
  - Secant can provide a commercial, non-proprietary archive (NAS or BlueRay)
  - Parts and service are available from the PC supplier you use today
  - Exams available using a standard DICOM viewer, no PACS required
